June 14, 2019

## NOTICE OF DISPOSITION – DOCKET 2019-2

This notice reflects proposed amendments considered by the Commodity Classification Standards Board (CCSB) at the public meeting on June 11, 2019, and the action of the CCSB on each proposal.

Dispositions resulting in amendments to the National Motor Freight Classification® (NMFC®) will be published in a supplement to the NMFC, unless reconsideration is granted in accordance with the CCSB's rules. The supplement is scheduled to be issued on July 25, 2019, with an effective date of August 24, 2019.

The CCSB may, in its discretion and for good cause shown, reconsider any docketed proposal on which disposition has been made. Requests for reconsideration must be made by mail, email or fax by a party of record to the proposal and must be received in my office no later than 5:00 pm Eastern Time, July 1, 2019.

Information on the CCSB and its procedures for amending the NMFC may be obtained online at [www.nmfta.org](http://www.nmfta.org). Go to "NMFC" on the navigation bar. If you do not have Internet access, or if you need assistance, please contact me at 703-838-1826 or [ringer@nmfta.org](mailto:ringer@nmfta.org).

Please reference the docket and subject numbers on all correspondence.

ITEM 203

DEFINITION AND SPECIFICATIONS FOR PLASTIC SEMI-BULK BAGS

⇒Cancel; see Item 280.

THIS SPACE INTENTIONALLY LEFT BLANK

## SUBJECT 13 — DOCKET 2019-2 — APPROVED AS DOCKETED — Continued

## ITEM 280

**DEFINITION OF OR SPECIFICATIONS FOR INTERMEDIATE BULK CONTAINERS (IBCs)****⇒General Definition and Specifications**

⇒**Sec. 1.** Intermediate Bulk Containers (IBCs) are large flexible, semi-rigid or rigid portable packages that permit handling with mechanical equipment and may be constructed from a variety of materials including fabric, fiberboard, metal, plastic or wood, or a combination thereof, see Secs. 2 and 3 herein. The receptacle of an IBC has a volumetric capacity of not more than 3,000 liters (793 gallons or 106 cubic feet) and not less than 450 liters (119 gallons or 15.9 cubic feet) or a maximum net mass of not less than 400 kilograms (882 pounds). They must be designed with handles, straps, legs, an integral lift truck skid, pallet or platform base, or be secured on a lift truck skid, pallet or platform so as to provide for mechanical equipment to safely pick up the container, and must be constructed so as to sufficiently contain and protect the contents and withstand the normal rigors of the less-than-truckload environment. IBCs intended for stacking must have an integral stacking alignment or securing design feature. IBCs must be securely closed, and sufficient outage must be left within the IBC to ensure that the package will not leak or be permanently distorted as a result of liquid expansion due to change in temperatures likely to be encountered during transportation. IBCs designed for the transport of solid materials must be sift-proof and water-resistant. Bottom valves must be secured in the closed position, have a secondary means of sealing and must sufficiently protect against damage (e.g. shearing).

**⇒Flexible IBCs (FIBCs)**

⇒**Sec. 2.** Flexible IBCs (FIBCs) may be used for dry commodities only and must be constructed as follows and meet the performance requirements specified herein. FIBCs must be made from coated or uncoated polyethylene or polypropylene woven fabric so constructed as to contain and protect the contents and withstand the normal rigors of the less-than-truckload environment. Handles or straps must harness, encircle or be securely attached to the FIBC body to facilitate handling by mechanical equipment. FIBCs with spouts for discharging purposes, or with top or bottom filling or discharging openings, must be secured by means that will provide a sift-proof closure. FIBCs on lift truck skids, pallets or platforms must be designed and secured so that container and contents will not overhang the lift truck skid, pallet or platform deck. FIBCs may be used again in transportation only when they are in such condition that they will protect contents as effectively as new containers.

**⇒Nonhazardous Liquids in Fiberboard IBCs with Inner Plastic Film Bag or Liner**

⇒**Sec. 3.** Nonhazardous liquids may be shipped in fiberboard IBCs having an inner plastic film bag or liner and secured on a lift truck skid, pallet or platform. Container must be six-sided and made of solid or of multiwall corrugated fiberboard sufficient to support the capacity of the inner plastic film bag or liner and its contents. Inner plastic film bag or liner must have sufficient outage to provide adequate containment during transport. Fiberboard container must not overhang the lift truck skid, pallet or platform deck and must be secured on the lift truck skid, pallet or platform by strapping in opposing directions, with at least two straps in each direction.

**SUBJECT 13 — DOCKET 2019-2 — APPROVED AS DOCKETED — Concluded**

**⇒Use for Hazardous Materials**

⇒**Sec. 4.** IBCs used for the transportation of hazardous materials must be in conformance with the applicable requirements of Title 49 of the Code of Federal Regulations (CFR). ASTM D7387, Standard Test Method for Vibration Testing of Intermediate Bulk Containers (IBCs) Used for Shipping Liquid Hazardous Materials (Dangerous Goods), may be used to test the integrity of the IBC, providing the 49 CFR requirements have been met.

**Comment**

Item (Rule) 203 is canceled with reference to Item (Rule) 280. Item 280 is concurrently amended to provide additional requirements and specifications, including incorporating provisions from Item 203.
